

Over the Hill

Players/Skills: 2 players, using addition/subtraction to reach target numbers

Materials Needed: 3 regular dice for each group

Game sheet - below

Gameplay:

1. Group players into pairs; give each player an **Over the Hill** game sheet and **three dice**.
2. Players will take turns rolling all three dice. They are to add or subtract the amounts shown on the rolled dice and then cross off those sums or differences on their own number line.
3. Players cross numbers off in **numerical order** starting at 1 and will cross off as many numbers as possible each roll. When they cannot create any more numbers from their dice, it is their partners turn.
4. Each player's turn starts at the end point from their previous turn. **The first to go "Over the Hill" and reach 18 wins!**

Example:

Player A rolls **3, 4, 6**. She can cross off **1** ($4-3=1$), **2** ($6-4=2$) and **3** ($6-3=3$) from her hill. She cannot make a sum or difference of 4, so now it is her partner's turn to roll. Player B rolls and crosses off as many as possible on his hill.

Player A rolls again and starts where she left off at the number 4 on her hill. Continue alternating rolls until a player gets to 18-Over the Hill.
