Divide the students into groups of four. Give each group half of an UNO® deck with word cards removed. Wild cards stay and kids can place any value on them from 0-9.

Deal all the cards, giving an equal number to each player. The cards are left face down in a pile in front of each player. The first person turns over a card and places it face up in the center of the playing area. The next person turns over a card, adds it to the card already played and says the sum out loud. The next person turns over a card, adds the card to the pile, and says the new sum. Play continues in this way until someone has a card that, when added, will give a sum equal to or greater than 20. Once the sum of cards equals 20 exactly, the game is over.

If the sum is greater than 20, the next person to play must subtract rather than add. Play continues until someone gets a sum or difference of exactly 20.

**VARIATION:** Only give younger students cards with numbers up to 5. Give older students cards with numbers greater than 5.
