Divide the detectives into pairs. Read the Math Riddles to them. (If there are volunteers who would like to read them, ask them to come to the front of the class and read). After reading the riddles, give each pair some time to try to solve them.

If no one is able to solve them, read the answers to the class.

After sharing the wide variety of riddles to the class, ask each pair to write their own riddles. If they are struggling, they might use the concepts in some of the riddles you read.

Give volunteers a chance to read their riddles to the class.

Explain to students that one set of tools they will use in the camp will not fit in the tool kit. That is because these tools are part of their brains and bodies. Brains are important tools because they help detectives to THINK. Nature detectives must think at all times.

MATERIALS:
* Pencils
* Tool kits
* Math Riddles sheet
* My Senses Tool
