

Hello Wonderful Zeno Partners!

It is our goal to continue to spark joy and inspire a love of math. Families can engage their children in each math concept before they even receive their games! Let's explore the math concept of Geometry.

Geometry Activities

- Gather sticks or other items from outside with your child. You can see what different shapes your child can make using the sticks.
- You can go on a shape hunt with your child. See what different shapes you can find together. For example, a street sign is a **rectangle**!
- Discuss the shapes of various food items and utensils when eating with your child. For example, you can discuss how a plate is like a **circle** or a slice of pizza is like a **triangle** because it has 3 sides.
- Play Shape Yoga with your child. You can talk about the different shapes you can make with your body. For example: "I can make a **triangle** if I touch the floor with my hands in front of my feet!" or "I can make a **circle** with my arms".
- Bake cookies together and use the dough (premade is fine) to roll into long strips to create your own shapes. For example, "I made a **trapezoid**, wow! I made a **square**!". After your shape creations feel free to roll them into a ball and "smash" them flat or bake them as is.

Book Recommendation

- Round is a Mooncake by Roseanne Thong

Song Recommendation

- Shape Yoga

Connecting with Geometry
