

Connecting with One-to-One Correspondence

Hello Wonderful Zeno Partners!

It is our goal to continue to spark joy and inspire a love of math. Families can engage their children in each math concept before they even receive their games! Let's explore the math concept of One-to-One Correspondence.

One-to-One Correspondence Activities

- Create a counting collection with your child. Gather a set of objects such as pennies, keys, toy vehicles, rocks, crayons, or any other small, fun objects. Then count the collection.
- Give your child ways of organizing their counting objects collected above. Use cups, egg cartons, ice cube trays etc. For example, as the child counts each item, move it into the ice cube tray so that they know it has been counted.
- Use cereal, beans, or other practical food items to count on the dinner table. You can also write down numbers on a line of tape to help count out the items and help your child remember the numbers they already counted.
- Introduce a table with 5 squares known as a 5-Frame and a table with 10 squares known as a 10-frame to practice one-to-one correspondence by having them place an item in each square as they count it out loud.
- When your child counts their toys say, "I see you touched each toy once as you counted them. You counted 4 toys total!"

Book Recommendation

- Ten, Nine, Eight by Molly Bang

Song Recommendation

- 1, 2, Buckle My shoe
