

Connecting with Number Recognition

Hello Wonderful Zeno Partners!

It is our goal to continue to spark joy and inspire a love of math. Families can engage their children in each math concept before they even receive their games! Let's explore the math concept of Number Recognition.

Number Recognition Activities

- Draw many chalk circles on the ground. Write a number in each circle from 1 to 10. Call out a number and have your child find a circle with that number inside.
- Go on a number hunt! While on a walk with your child look for numbers along the way. For example, a bus number, numbers on a car, poster, gate, house etc.
- Read stories or books with numbers on the pages with your child and say, "I see the number 5 on this page, can you find 5 of something?"
- While preparing food write a number next to your child plate and have your child place the right number of snacks on their plate. For example, have your child place 3 raspberries next to the number 3.
- Create a linear family picture with your child using the ages of family members to determine the order. The family could be ordered from oldest to youngest or youngest to oldest.

Book Recommendation

- Just a Minute by Yuyi Morales

Song Recommendation

- This Old Man
