

Connecting with Ordinal Numbers + Sequencing

Hello Wonderful Zeno Partners!

It is our goal to continue to spark joy and inspire a love of math. Families can engage their children in each math concept before they even receive their games! Let's explore the math concept of Ordinal Numbers and Sequencing.

Ordinal Numbers + Sequencing Activities

- Talk about the steps in your cooking routine, "First, I pour the water in the pot to boil. Second, I add the rice to the pot. Third, I put the lid on the pot, and fourth, I set the timer for 30 minutes."
- Talk about the order of washing your hands, "First, you turned on the faucet. Second, you put soap on your hands. Third, you scrubbed your hands. Fourth, you rinsed your hands, and fifth, you dried your hands!"
- Ask your child to describe the sequence of a familiar routine such as a morning routine or life cycle of an insect.
- Go over your schedule for the day, talk about what your child will do first, second, third, fourth, etc.
- Parent – child races! Have a race as a family using balls, people, or toy cars. See who finishes the race in first, second, third, etc.
- Talk with your child about how old they turn on each birthday. Ask your child "How old did you turn on your 2nd birthday? How old do you think you will turn on your 7th birthday?"

Book Recommendation

- 7 Blind Mice by Ed Young

Song Recommendation

- 5 Little Pumpkins
